

Directions for Use - for Minimizing Spray Drift

Directions for Minimizing Spray Drift:

Spray directly on weeds (or apply with hooded spray equipment is recommended to prevent the spray from contacting crop.) Use equipment to direct spray on to the weeds. Do not use mist blowers or any other application techniques which may result in drift on to desirable vegetation. Do not allow spray solution to drip, splash or drift on to desirable vegetation; small amounts can cause severe damage to crops. Use low drift, low pressure nozzles.

These procedures will also reduce the potential for off-target drift and crop injury:

- Spray hoods must be operated on the ground or skimming across ground surface
- Operate at ground speeds of no greater than 5 miles per hour to avoid bouncing of the spray hoods
- Apply when wind speeds are 10 miles per hour or less
