

Avenger AG Burndown Herbicide Frequently Asked Questions

What is Avenger AG Burndown Herbicide?

Avenger AG Burndown Herbicide is an organic, burndown herbicide that is post-emergence, fast-acting and non-selective.

How does Avenger AG Burndown Herbicide work?

Avenger AG Burndown Herbicide contains d-limonene, or citrus oil extract, a powerful, natural degreasing agent that strips away the waxy cuticle from weeds' leaves, causing fast wilting (necrosis), dehydration and death.

What will Avenger AG Burndown Herbicide control?

Avenger AG Burndown Herbicide controls most annual and perennial weeds, both grasses and broadleaves. It is non-selective, and should not be sprayed on desirable plants as they will be damaged.

Will it prevent weeds from coming back?

Avenger AG Burndown Herbicide is a fast-acting, post-emergence herbicide for use on weeds that already exist. It will not control weeds that have yet to germinate.

Where can I use Avenger AG Burndown Herbicide?

Avenger AG Burndown Herbicide is EPA registered for use in all crops, as well as control of weeds in non-crop areas such as borders, around mature trees and ornamentals, around buildings, in greenhouses, industrial sites, nurseries, roadsides, etc.

How is Avenger AG Burndown Herbicide packaged?

Avenger AG Burndown Herbicide is available in 1 Gallon & 5 Gallon pails and 55 Gallon Drums.

What is the application rate?

See Label for Complete Application Instructions.

For general purpose broadcast applications, use product at a ratio of 1 part Avenger AG Burndown Herbicide into 6 parts of water (14%).

What water volume per acre should I use?

For best performance complete coverage of target weeds is necessary. The volume required per acre will depend on density and maturity of weeds.

At least 60 gals of water per acre is recommended to insure adequate coverage.

When do I apply Avenger AG Burndown Herbicide?

It is best to apply when weeds are "small", below 6 inches. See label for complete instructions.

Can I apply Avenger AG Burndown Herbicide by air or irrigation pipes?

No.

Who is using Avenger AG Burndown Herbicide?

Organic farmers across the country are successfully using Avenger AG Burndown Herbicide to kill a variety of grasses and broadleaf weeds in crops such as tree fruit, grapes, berries and vegetables.

Is Avenger AG Burndown Herbicide registered for organic use?

Yes, Avenger AG Burndown Herbicide is NOP compliant (National Organic Program) and OMRI® listed.

What spray nozzle/nozzle pressure should I use?

Either hollow cone or flat fan nozzles can be used to apply Avenger AG Burndown Herbicide.

Match the nozzle size necessary to apply the proper amount of product at low to moderate pressures while avoiding excessive pressures that result in small droplets that are prone to drift.

When spraying around desirable plants, make sure and always use a sprayer hood to better control the spray pattern and help prevent spray droplets from touching desirable plant foliage.

What pH range is best?

Avenger AG Burndown Herbicide works best at higher pHs, but 6-10 is fine.

If I apply Avenger AG Burndown Herbicide to control the weeds beneath my fruit trees or vines is that a broadcast treatment or a spot treatment?

Applying Avenger AG Burndown Herbicide as a band application is considered a spot treatment and is allowed on both fruiting and non-fruiting plants.

Be careful to ensure that the application does not come into contact with desirable foliage.

Is a spreader sticker required?

Avenger AG Burndown Herbicide is formulated as an emulsifiable concentrated liquid which already contains surfactants. However, you may see faster or better activity with the addition of an adjuvant that improves spreading, sticking or penetration of the leaf surface.

What if it rains?

If rain is expected within 1 to 2 hours, or if windy conditions exist, do not apply.

Also allow heavy dew to evaporate prior to Avenger AG Burndown Herbicide applications.
